Summary

Accomplished software developer with 16 years of experience specializing in Java and Microservices architecture, complemented by proficiency in Python development. Proven track record in leading development teams, designing scalable systems, and implementing efficient solutions in complex, data-driven environments. AWS Certified with a strong background in Spark, Spring Boot, and Kubernetes.

Work Experience

JPMorgan Chase, Bengaluru Vice President January 2021 - Present

Project: JPMC Private Banks Party and Account Data Platform Duration: June 2022 - Current Role: Java + Python Developer

- Implemented Spring Boot-based Microservices to support the platform.
- Designed and implemented a Kafka-based distributed architecture to enable asynchronous distribution to various data stores.
- Developed capabilities to check distribution status across multiple data stores.
- Implemented a Python project focused on automating testing workflows, utilizing Python frameworks to generate and validate code.
- Implemented a RAG-based solution to auto-assign incident tickets based on microservice owners, leveraging Large Language Models (LLM).
- Conducted technical sessions for the team on Large Language Models (LLM) and Agent-based RAG architecture, promoting knowledge sharing.

Project: Spark-based Regulatory Reporting Application Duration: June 2020 - June 2022 Role: Scrum Master & Lead Java Developer

- Designed and architected a configurable and scalable distributed data processing framework using Spark to generate regulatory reports.
- Implemented the framework in Java & Spring, enabling the generation of Spark transformations based on data source/target attributes.
- Developed Spring Boot-based Microservices for metadata management and data quality controls.
- Led the effort to move Spark jobs to a Kubernetes managed cluster.
- Served as Scrum lead supporting critical regulatory reports.

Morgan Stanley, Bengaluru Consultant (Publicis.Sapient) October 2018 - May 2020

Project: Java & Spark Data Ingestion Framework for Operations Tech Duration: Role: Lead Java & Hadoop Developer

- Implemented a Java & Spring-based data ingestion framework to hydrate the Hadoop data lake.
- Developed an Angular UI & Spring Microservice-based full-stack application for monitoring ingestion status.

Wells Fargo, Bengaluru Consultant (Publicis.Sapient) October 2016 - September 2018

Project: Enterprise Data Lake Framework Duration: Role: Lead Java & Hadoop Developer

- Implemented Java+Spring-based Microservices to support Enterprise data lake platform.
- Implemented Real-Time Data Ingestion Microservice leveraging Kafka.
- Enhanced Spark-based Data Quality Microservice by adding the ability to generate Spark jobs based on Business Rules.

JPMorgan Chase, Mumbai Associate June 2014 - September 2016

Project: Security Lending Middleware Platform Duration: Role: Java & Spring Developer

- Developed a Java & Spring-based middleware service platform to support Security lending transactions.
- Leveraged Java concurrency framework to support highly concurrent low-latency trading applications.

Deloitte Consulting, Mumbai Systems Engineer June 2008 - June 2014

Project: IBM Global Move Project & US Tennessee Government Welfare Project Duration: Role: Java & Spring Developer

- Implemented critical components of IBM Global Move solution using Java & IBM Websphere portal technology.
- Implemented Java & Struts-based framework to support Child care solutions of the State of Tennessee, US.

Skills

- Core Java
- Spring Boot
- Microservices
- AWS
- Spark
- Kafka
- RDBMS (Oracle, MySQL)
- NoSQL (MongoDB)
- Kubernetes
- Docker

- Angular
- Python
- Large Language Models (LLM)
- Retrieval-Augmented Generation (RAG) Architecture

Education

Bachelor of Technology in Computer Science, IIT Kharagpur, 2008

Certifications

- AWS Certified Solutions Architect
- Large Language Models (LLM) Certification, DataCamp
